MedPACS and MDI Announce Installation of New PACS

Hartland, WI, August 23, 2004 – MedPACS Displays, Inc. (MedPACS) and Medical Diagnostic Imaging (MDI) today announced the installation of MedPACS' Vista system. Vista is a completely scalable Intranet and Internet-enabled PACS solution that's configured based on the customers annual study volumes.

According to the Company, Vista is essentially an onsite ASP. All hardware and software, as well as maintenance and upgrades necessary to support the annual study volume, are provided for worry-free operation. In addition, there's no limit to the number of users that can access the system or the number of times that data can be viewed.

“MDI has been a great customer for MedPACS and we're very pleased that they decided to purchase the Vista,” said Phil Jones, Founder and President of MedPACS. “The Vista is a great system especially for lower volume sites because the pricing structure allows them to have a complete PACS and pay for it out of their operating (film) budget.

The system installed at MDI provides 1 terabyte of archive storage growth per year and is designed to manage up to 25,000 studies per year. An unlimited number of viewers (VistaDisplays) are included, allowing radiologists and referring physicians to securely view their patient's images from the imaging center, hospital, their office, home, or other remote locations. All data is encrypted for security and users can quickly and easily download updates from MedPACS' Web site. A digital tape back-up system provides disaster recover.

MDI also purchased the MedPACS HL7 Module that receives HL7 reports from their RIS for storage in the archive and a WinFILM CD ROM writer to produce image CD's for patients.

“We evaluated a number of competing systems and chose MedPACS because of the capabilities and value provided with the Vista system,” commented Carol Martin, Executive Director at MDI. “We've been happy with MedPACS' products and service in the past and Vista provides a secure, economical, fast and efficient way to distribute images - not only for our radiologists but also for our referring physician customers,” Martin added.

Medical Diagnostic Imaging is physician owned and is dedicated to giving patients the utmost care, comfort and convenience while providing their physicians with the best service and quality possible. Providing state-of-the-art MRI, CT and US for body, orthopedic, neurological and vascular imaging, MDI puts the customer first and offers many complimentary services, same-day or next-day scheduling, and evening and weekend hours.
