MedPACS Announces Enhancements to its Vista PACS to be Shown at the RSNA

Hartland, WI, October 12, 2004 – MedPACS Displays, Inc. (MedPACS) announces enhancements to its Vista PACS, a scaleable Intranet and Internet-enabled fee per study PACS designed for small to medium sized hospitals, diagnostic imaging centers and multi-specialty clinics.

The following enhancements, which are designed to provide additional utility and to make the system even easier to use, will be shown at the RSNA:

- ***VistaReport (WIP)*** – provides an integrated reporting capability that allows the radiologist to type or dictate reports while viewing images in the VistaDisplay. The user can create an unlimited number of templates, which are automatically pre-populated with the appropriate patient demographic information, and voice dictated reports can be easily edited. When completed, the radiologist electronically signs the report, it's placed on their letterhead, and is sent to the Vista archive and RIS.
- ***VistaConsult*** - allows radiologists using the Vista system to conference and review images with another non-Vista physician. After logging-onto the MedPACS Web site, selecting the proper conference to join and entering a password, the referring physician sees exactly what the radiologist is viewing, including any annotations, enabling consultations to be conducted in real-time over the phone. This is all done with a standard Web browser - no special software, set-ups or downloads are required.
- ***MultiView*** – provides the ability to view a CT image set in multiple planes, including single and double oblique views, aiding in the diagnosis of complex structures and diseases. The easy to use graphical software is seamlessly integrated with the VistaDisplay.
- ***Improved Hanging Protocols*** – includes smart software so that when a user adjusts screen format and image magnification preferences for a particular type of study, Vista “remembers” the settings and then maintains that each time the user accesses that type of study - making image review faster and more efficient.

With the exception of VistaReport, which will be a purchasable option, these enhancements will be included at no charge and are part of the Vista per study fee. The per study fee covers all server/archive hardware and software, maintenance and upgrades, and viewer software required to support the customer's annual study volume.
